Reviewer's report

Title: Half dose verteporfin photodynamic therapy for bullous variant of central serous chorioretinopathy

Version: 1 Date: 25 November 2010

Reviewer: paradee kunavisarut

Which of the following following best describes what type of case report this is?: Other

If other, please specify:

This case report demonstrate the benefit of treatment which has been previously reported (half dose PDT) in rare disease (bullous CSC) but with long-term follow-up (more than 3 years).

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

In case presentation should include the data of the following
1. History of steroid used (in any route), if not should indicated.

The history of steroid used is important because bullous CSC may improve after cessation of the drug (not from PDT).
2. Inflammatory reaction in AC and vitreous, systemic complaint or finding to rule out the inflammatory disease such as VKH.

3. Fundus, FA, ICG and OCT findings of left eye (normal or abnormal such as PED or window defect)

In discussion, if possible please hypothesize the reason of the success of this treatment in this patient such as idiopathic and/or early treatment, etc.

In legend Figure 2D, the description is irrelevant (leakage or not leakage).
