Reviewer’s report

**Title:** An unusual case of congenital melanocytic nevus presenting as neurocutaneous melanoma coexisting with Tuberous Sclerosis complex: a rare association or a new syndrome?

**Version:** 3  **Date:** 20 March 2011

**Reviewer:** Devendra Mishra

**Which of the following following best describes what type of case report this is?:** New associations or variations in disease processes

**Has the case been reported coherently?:** Yes

**Is the case report authentic?:** Yes

**Is the case report ethical?:** Yes

**Is there any missing information that you think must be added before publication?:** No

**Is this case worth reporting?:** Yes

**Is the case report persuasive?:** Yes

**Does the case report have explanatory value?:** No

**Does the case report have diagnostic value?:** No

**Will the case report make a difference to clinical practice?:** Yes

**Is the anonymity of the patient protected?:** Yes

**Comments to authors:**

Thank you for carrying out the necessary changes.

A few references are still cited in text in superscript (e.g., 15).

First few sentences in para 3 of discussion on TS diagnosis are not needed (highlighted in accompanying manuscript).

The conclusions are too far-reaching to be derived from singular experience.

**Quality of written English:** Needs some language corrections before being published
