Reviewer’s report

Title: An unusual case of congenital melanocytic nevus presenting as neurocutaneous melanoma coexisting with Tuberous Sclerosis complex: a rare association or a new syndrome?

Version: 3 Date: 23 March 2011

Reviewer: Prem Sagar Subramanian

Which of the following following best describes what type of case report this is?: An unexpected association between diseases or symptoms

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

Thank you for your revision and comments. There is still a need for some English language editing. In the version I accessed, there is still an age discrepancy. Last line of the introduction states 11 yr old, while the case report section reads 16 yr old. Please correct.

Quality of written English: Needs some language corrections before being published
