Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

In “case presentation”:

About this sentence" According to clinical, radiological and histological evaluation the grade of the lesion was Stage 2." The grade and stage of one tumor are two different entities. The grade is related to histological evaluation and the stage is related to TNM (size, lymph node, and metastasis) criteria. This sentence should be revised.

In treatment process of these patients, all of them were referred to oncology hospital. It is better to write exact treatment modality.(surgery, radiotherapy,..)
In the legends of pictures, the radiographic appearance of lesions should be described briefly.

This article could be published after these minor revisions.
