Title: Bardet-Biedl Syndrome with end stage kidney disease at an early age: a case report

Version: 2 Date: 15 February 2010

Reviewer: Narayan Prasad

Comments to authors:

The case report “Bardet-Biedl Syndrome (BBS) with end stage renal disease at early age” is interesting. The renal involvement in BBS is well known but only rare presentation is early age. The patient was maintained on peritoneal dialysis which is accepted modality of renal replacement therapy. There are 14 figures and some of the figures should be removed. Only figure which has diagnostic value can be kept.

The case report can be accepted for publication.
