Reviewer's report

Title: Giant right coronary artery aneurysm presenting with non-ST elevation myocardial infarction and severe mitral regurgitation: a case report

Version: 1 Date: 25 May 2011

Reviewer: Ashlesh Murthy

Which of the following following best describes what type of case report this is?: Other

If other, please specify:

A presentation of a rare clinical entity that adds to available literature evidence.

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The manuscript by Nazareth et al describes a case of giant right coronary artery aneurysm in a 78-year old Caucasian male patient. The authors clearly describe the presentation, diagnosis, and management. The figures are very clear and descriptive for the condition being discussed. The manuscript is well-written. The etiopathogenesis remains uncertain for this condition in general, and that holds true even in this case presented. It would have been interesting if the authors could have provided more insight, or at least speculated more in this regard, based on this patient's history/symptomatology/clinical and laboratory findings.
etc. However, it is noted that the authors clearly admit that this is not a novel case, and just another presentation of a rare clinical entity.
