Reviewer’s report

Title: Heterotopic Ossification presenting in Trisomy 8 Mosaicism: a case report and literature review

Version: 1 Date: 7 June 2010

Reviewer: Oscar Ares

Has the case been reported coherently?: Yes

Comments to authors:

I have revised the manuscript. The authors should take care with the figures, and figures legends and the manuscript because in the text the said figure 4, and there is not any figure 4.

The authors said that the cause of the heterothopic ossification is related with the trisomy. I think that they only could say that it their opinion, or may be is a risk factor but more studies should be done in this relation between HO and trisomy.

It is a very spectacular case. The figures are incredible. It should be published but it need minor revision.
