Reviewer's report

Title: Budd-Chiari syndrome in a 25-year old woman with Behcet’s disease: a case report and review of the literature

Version: 1 Date: 19 March 2010

Reviewer: Asma Ouakaa-Kchaou

Which of the following best describes what type of case report this is?: An unexpected association between diseases or symptoms

Has the case been reported coherently?: No

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

Concerning the case presentation:
The distinction between the two diseases is not clear. It would be better to emphasize in signs and exams for each disease (Behcet and Budd-Chiari) separately.
The diagnosis of Budd Chiari is not clear (only one hepatic vein without flow). Did you perform other exams (CT or MRI)?
Concerning the aetiology of Budd Chiari syndrome, did you perform other tests (osteomedullar biopsy, jak test...)?

Concerning discussion:
The case report should be stated during the discussion to compare with
literature.
