Reviewer’s report

Title: Primary extranodal soft tissue B cell lymphoma with abundant immunoglobulin inclusions mimicking adult rhabdomyoma: a case report

Version: 1 Date: 26 May 2010

Reviewer: alun wang

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

This is an interesting and unique case in that a. a rather large soft tissue B-cell lymphoma presented with rhabdoid features; b. the case was thoroughly studied using routine examination as well as electron microscopy and B-cell heavy and light chain gene rearrangement study.

Minor changes:
p1: Xi’an, Shaanxi or Shanxi?
p2 and p7: ‘molecular genetical study’ should be changed to molecular study.
p5: uterine should be urine

Quality of written English: Needs some language corrections before being
published
