Reviewer's report

Title: A patient with ALS and atypical clinical and electrodagnostic features: a case report

Version: 2 Date: 23 May 2011

Reviewer: Bernhard Schaller

Comments to authors:

The authors present an interesting manuscript. However, the topic is not entirely new. For that reason, I would suggest that the authors point out clearly what is the new feature of the manuscript and add an table with the previous published similar cases.
