Reviewer's report

Title: Struma ovarii presenting with Hashimoto's thyroiditis: A case report

Version: 6 Date: 9 August 2011

Reviewer: Neetu Jain

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

1. What percentage of patients were found to have thyroiditis in relation to struma ovarii?
2. Approximately 5% of patients have thyrotoxicosis in relation with struma ovarii, then what makes this case an unusual presentation of subclinical hyperthyroidism? [1]
3. Please provide CT/MRI images of abdomen
