Reviewer's report

Title: Multifocal invasive ductal breast cancer with osteoclast-like giant cells

Version: 2 Date: 31 August 2010

Reviewer: Teri Longacre

Which of the following following best describes what type of case report this is?: New associations or variations in disease processes

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

This is a well illustrated report of multifocal invasive ductal carcinoma with osteoclastic giant cells. It would be improved if the authors were to perform an additional immunohistochemical stain for the giant cells, perhaps CD68. Also, please provide the overall Nottingham grade for the invasive cancer. Provide dilutions for all antibodies used (if predilute, state so).

Quality of written English: Needs some language corrections before being published
