Reviewer’s report

**Title:** Intramedullary spinal cord metastasis from prostate carcinoma: a case report

**Version:** 1  **Date:** 19 January 2012

**Reviewer:** Bernhard Schaller

**Comments to authors:**

The author present an interesting and well written case report about a clinical important but rare event. Abstract, Introduction and Case Presentation are well written and need no revision. However, the discussion is too long and should therefore be shortened. Please omit all "text-book-knowledge". Please focus only on the main patterns of the case report in the discussion. In the reference section I would suggest to add a corner stone paper (Br J Cancer. 1998 Jun;77(12):2386-9) and mention it also in the discussion.
