Reviewer's report

Title: Diffuse Large B Cell Lymphoma Presenting as Horner's Syndrome in a Patient Diagnosed with Neurofibromatosis Type 1: A Case Report and Review of Literature

Version: 4 Date: 9 November 2011

Reviewer: Eric Jacobsen

Which of the following following best describes what type of case report this is?: An unexpected association between diseases or symptoms

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

Would remove reference to 1982 Working Formulation classification of lymphoma and describe why the patient didn't receive rituximab along with CHOP.

It would be worth speculating as to why most patients with NF develop T cell lymphoma while most lymphomas world-wide are B cell lymphomas

Quality of written English: Acceptable
