Reviewer's report

Title: Intramedullary Lumbar Dermoid in a child- Case Report and Review of literature.

Version: 5 Date: 25 September 2012

Reviewer: Bernhard Schaller

Comments to authors:

The authors present an interesting case. However, there are substantial parts of the manuscripts that have to be changed before the manuscript can be evaluation for an acceptance for publication.

1. The discussion is too long and overwhelmed with book-chapter knowledge. That should be changed.

2. The authors should make clear in the discussion and in the conclusion what is unique in this case report that make it worth to be published.
