Reviewer's report

Title: Meig's Syndrome presenting with Axillary Vein Thrombosis and Lymphadenopathy: A case report

Version: 2 Date: 18 March 2013

Reviewer: Dimitri Hadjiminas

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

Meig's syndrome is rare and often may mislead clinicians to strongly suspect a malignancy. This case has some unusual features presenting with lymphadenopathy which is possibly part of the syndrome in this case. I think it is important to make clinicians aware of this possibility.

Quality of written English: Acceptable
