Reviewer's report

Title: Delayed Diagnosis of Anterior Subluxation of C7 vertebrae in a Post-Traumatic 35 years old with unusual neurological pattern - a case report

Version: 4 Date: 18 July 2012

Reviewer: Bernhard Schaller

Comments to authors:

"The authors present an interesting and well-written case report. The case is unique and I have therefore only some few suggestion to make.

Abstract: The conclusion is too superficial and should be rewritten. It should be mentioned that the case is unique.

The discussion of the paper is too long and should strickly focus on what is new in the present case. Please shorten the discussion to a third of the current length."
