Reviewer's report

Title: Rapid resolution of acute subdural hematoma in severely head-injured child: a case report

Version: 3 Date: 22 October 2012

Reviewer: Dieter Class

Which of the following best describes what type of case report this is?: An unexpected event in the course of observing or treating a patient

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

In the introduction (line 5) the authors make a comment on treatment questions. I'd suggest being careful with the opinion: a hematoma with a thickness greater than 10 mm or midline shift greater than 5 mm........should be surgically evacuated....regardless of the Glasgow score.

Clinical aspects should be taken into consideration in any case very carefully in addition to radiological criteria

Quality of written English: Needs some language corrections before being published
