Reviewer's report

Title: A Prader-Willi Syndrome Patient with Excessive Daytime Sleepiness and Narcoleptic Symptoms: A Case Report

Version: 2 Date: 14 September 2013

Reviewer: Mark Buttigieg

Which of the following best describes what type of case report this is?: Other

If other, please specify:

A potential new treatment modality for disordered sleep patterns in Prader Willi Syndrome

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: No

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: No

Comments to authors:

Clearly written and tackles disordered sleep patterns in Prader Willi Syndrome which often is not managed adequately and is important in the holistic care of the PWS patient. Disordered sleep not managed effectively leads to a myriad of other medical co-morbidities as described.

This case report may be an impetus to perform a randomised controlled trial blind/non blind in the use of modafinil in PWS.
Quality of written English: Acceptable
