Reviewer's report

Title: Jejunoduodenal intussusception caused by a solitary polyp in a young female with Peutz-Jeger's syndrome: a case report

Version: 3 Date: 5 August 2013

Reviewer: I. Emre Gorgun

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

I congratulate the authors on this successfully treated patient and the efforts to publish it.

This is a unique case presenting a rare association of an unusual finding in a well-known disease. In this aspect it has an important publication value however there are various issues that need to be addressed before publication:

1. The manuscript should be revised by a native English speaker: (Manuscript needs to be substantially revised for grammar and typos)
2. Please provide detailed explanation of the operative procedure: How was the enterotomy/small bowel resection repaired? Did you consider stapling technique for the closure of this side. Please include discussion regarding different repair
options for the diseases of this area. This can include using circular stapler and performing a side to end anastomosis versus hand sewing.

3. It is unclear how 4th portion of the duodenum was invaginated into the distal segment i.e. proximal jejunum. If this was a true 4th portion of the duodenal polyp with the anatomical fixation of Treitz it would not be easily possible to invaginate. Please discuss your operative findings at laparotomy how this occurrence can be explained. Adding a clarification of the pathophysiologic mechanisms of the invagination of this area discussing the literature and possibly adding an illustration may help.

4. Please provide follow up information of your patient discussing your clinical protocol for following patients with Peutz Jeghers Syndrome? When, how often they need to be scoped etc.?

**Quality of written English:** Needs some language corrections before being published
