Reviewer's report

Title: An unusual variation of superior turbinate: case report

Version: 4 Date: 26 January 2014

Reviewer: Aleksandar Peric

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

This is very interesting and rare case of anatomical variation of superior turbinate causing symptoms such as nasal obstruction and headache. The authors correctly explained the cause of nasal obstruction. However, the explanation of headache is missing.

So, several sentences regarding the pathophysiology of rhinogenic headache should be added in the discussion section.

After this minor revision, the paper should be accepted for publication.

Quality of written English: Acceptable
