Reviewer’s report

Title: A de novo monoclonal immunoglobulin deposition disease in a kidney transplant recipient: a case report

Date: 28 January 2014

Reviewer: Paul Cockwell

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

I remain confused about the term myelogram - this refers to a test that involves the injection of radio-opaque dye into the spinal cord. Are you referring to a bone marrow aspirate? This does need clarification.

The Freelite test is produced by the company Binding Site. The lab referred to in the manuscript was running the test. Please amend accordingly.

Quality of written English: Acceptable
