Reviewer’s report

Title: A rare isolated unilateral myositis ossificans traumatica of the lateral pterygoid muscle: case report.

Version: 2 Date: 6 April 2014

Reviewer: Claudio Ungari

Which of the following best describes what type of case report this is?: Other

If other, please specify:

Presentations, diagnoses and new light on management of uncommon diseases

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The presentation of a clinical case of myositis ossificans traumatica is interesting because of its relatively low frequency of involvement of the pterygoid muscles. A good work was performed after revision; now it’s most clear the diagnostical examination and he clinical differential diagnosis of disorders of the temporomandibular joint in patients with panfacial fractures.
