Reviewer’s report

Title: Acute mercury poisoning presenting as a fever of unknown origin in an adult woman: a case report

Version: 2 Date: 7 February 2014

Reviewer: Giorgio Barbarini

Comments to authors:

Minor Essential Revisions:
- Introduction. Page 1 Line 5: the sentence needs a verb
- Case presentation. Pages 3-4: the family’s history must be better organized and more consequently described (in particular father’s and son’s clinical disorders and laboratory findings)
- Informed consents must be added specially in the case of the son
- The name of the first author of reference 12 (Bamonti) is correct in References but not in the text

Quality of written English: Needs some language corrections before being published.
