Title: Extramedullary progression of multiple myeloma despite concomitant medullary response to multiple combination therapies and autologous transplant: A Case Report

Version: 1 Date: 29 April 2014

Reviewer: Mahmoud Khattab

Comments to authors:

Comments to authors:
1-Abstract section: in conclusion: no need for describing indetails the possible pathogenesis of this eMM, as this is the domain of discussion section as you already have done.
2-Introduction section: What do you mean by: Upper aero digestive tract? - Also you have mentioned that EMP are usually without signs or symptoms, then how to suspect its presence or its diagnosis?
3- Case presentation: you have mentioned:....following this patient declined further treatment ....etc, you to correct to: following this the patient declined further treatment.
4-Conclusion section: No need to repeat pathogenesis and mechanisms of resistance of eMM to treatment regimens in this section.
