Reviewer’s report

Title: Tuberculous peritonitis in pregnancy: a case report

Version: 1 Date: 28 August 2013

Reviewer: Mehmet Bektas

Comments to authors:

The presentation of tuberculous peritonitis during the pregnancy is very rarely. For this reason this article can contribute to the literature.

The manuscript of language is clear.

There is a problem of section of discussion. The more general information has given in this section. The patient of information has not discussed adequately. For example:

1. Did they see any adverse effect of antituberculosis therapy?
2. Did you go on the treatment of antituberculosis therapy after delivery?
3. Is antituberculosis therapy safely during the pregnancy?

Revision is necessary for discussion section.

Quality of written English: Acceptable
