Reviewer’s report

Title: Primary extra-gastrointestinal stromal tissue tumor of the whole abdominal cavity, omentum, peritoneum and mesentery: a rare case report and review of the articles.

Version: 4  Date: 24 February 2014

Reviewer: Ibrahim Masoodi

Comments to authors:

1. The report is poorly written and needs major English editing,
2. Authors must write in detail histology of the samples removed. Has Upper GI and COLONSCPOY been done to rule out luminal GISTS
3. There is no proper sequence and flow is very poor in discussion
4. Instead of discussing general about GIST they need to focus on E-GIST only and quote similar cases in literature
