Reviewer's report

Title: Multidisciplinary approach of fused maxillary central incisors: a case report

Version: 3  Date: 3 September 2014

Reviewer: Adriano Piattelli

Which of the following following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The authors reported multidisciplinary clinical treatment of a case of an upper central incisor fusion. Even if there are other papers in literature focusing on this topic, the manuscript concerns an unusual anomaly, which was successfully treated through combined endodontic, orthodontic and prosthetic treatments. There are no missing information. The conclusions are supported by the data provided. The quality of the images is satisfactory.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
