Reviewer’s report

Title: Successfull mandible rehabilitation of lower incisors with onepiece implants.

Version: 5 Date: 22 September 2014

Reviewer: Giuseppe Spoto

Which of the following following best describes what type of case report this is?: Other

If other, please specify:

A new treatment option for edentulous patients

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The authors have provided an interesting retrospective study about immediate prosthesis of one piece implants in the mandible. The article is original and challenging.

The title is adequately informative, grammar and style are clear and concise. The lenght manuscript is adequate and the paper is well organized and written. Key word are appropriate. The surgical technique of insertion of the pilot drill before extraction of the root is truly original and effective for correct implant placement. However, the authors reported the presence
of periapical granulomas. The osseointegration of post-extraction implant could not be compromised by a chronic infection? How do they have prevented this possible complication?

The manuscript requires a thorough revision by an expert in scientific English. There are some spelling errors, e.g.:

Introduction 1st paragraph: enables stays for enables?
Outcomes: evalueted stays for evaluated
Data collection: conctact stays for contact

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published
