Reviewer’s report

Title: Right hepatectomy due to portal vein thrombosis in vasculobiliary injury following laparoscopic cholecystectomy: a case report

Version: 1 Date: 7 July 2014

Reviewer: Giovanni Vennarecci

Which of the following following best describes what type of case report this is?: None

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

English should be improved.

In the discussion section: Please comment on that injuries to bile duct and liver vessels are due to mistakes in dissections and that careful dissection around the neck of gallbladder is the best way to avoid them.

Please also write about the importance of biliary anatomy and anomalies of bile duct.

Please also comment why you needed to reconstruct the portal vein using a vein graft instead of doing a thrombectomy of portal vein during the hepatectomy.

Level of interest: An article whose findings are important to those with closely
related research interests

**Quality of written English:** Not suitable for publication unless extensively edited
