Reviewer’s report

Title: five years local control of subscapularis aggressive fibromatosis managed by surgery and imatinib: a case report

Version: 4 Date: 5 October 2014

Reviewer: Benoit Blondeau

Comments to authors:

The flow of the article is now adequate and allows a good understanding of the case.

However, the article still needs to be revised from the grammatical perspective. For example, the constant use of past tense does not meet the current use of Imatinib, a contemporary drug.

Furthermore some of the words used are faux-amis, such a resumed instead of summarized.

Quality of written English: Needs some language corrections before being published
