Reviewer's report

Title: Endometriosis presenting with only right side hydroureteronephrosis: a case report

Version: 2 Date: 7 August 2014

Reviewer: waleed alkhudair

Which of the following best describes what type of case report this is?: An unexpected association between diseases or symptoms

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

the merit of this report is the fact that the endometriosis affecting the ureter is intrinsic and that the right ureter was affected. A slide photo of the pathology involving the ureter intrinsically would support the claim.

Some redundancy is seen in describing the surgical techniques and that could be eliminated. The literature review is lengthy and need instead to focus on the main differences between common presentations and this case.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
