Reviewer's report

Title: Non-infections osteomyelitis of the mandible of a young female: a case report

Version: 2
Date: 30 October 2013

Reviewer: Stuart Ralston

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The authors have revised the case report appropriately. I have a small additional suggestion and that is to ask if the authors might include information on measurements of ESR and/or CRP if available in this case. It would be especially interesting if the measurements had been made before and after treatment with bisphosphonate but even if single measurements had been made that would be of interest.

Quality of written English: Acceptable
