Reviewer's report

Title: Natural killer cell function is depressed in Gulf War Illness.

Version: 1 Date: 18 February 2009

Reviewer: Yehuda Shoenfeld

Reviewer's report:

This is an interesting paper joining a long list of articles trying to nail the laboratory defect in GWI.

Indeed due to the similarity to CFS the authors pinpointed NK cell defects, supported also by gene array analysis.

1) Deserves an editorial.

(2) An attempt should be made to try to explore how NK cell defects are associated with the fatigue!!
