Reviewer’s report

Title: Gene Regulatory Network reveals Oxidative Stress as the Underlying Molecular Mechanism of Type 2 Diabetes and Hypertension

Version: 2 Date: 8 July 2010

Reviewer: shipra agrawal

Reviewer’s report:

Actually in the manuscript, the authors have apparently addressed the reviewer’s questions.

However, their supplementary data, which they claim to be additional data than the reported information, has to be checked properly and that takes time.

I would like to mention one major drawback in this manuscript:
The authors have not anywhere mentioned, what is the novel finding in their work. How many additional candidate genes they are reporting- this all has to be included in the summary and Introduction of the paper itself. How their method is unique in reporting these findings.

You may please ask them to do a critical check on their suppli data and highlight the novel information.

They must also include all the previous references (4 references) on systems biology of Diabetes type II to support their concept in the Introduction itself.
