Reviewer's report

Title: Integrating genomic technologies in clinical practice: A novel approach

Version: 1 Date: 11 April 2012

Reviewer: Richard Cotton

Reviewer's report:

Major Compulsory Revisions

Much text is a repetition of others re NGS/ES/WGS and is not necessary. The authors should highlight the existing advances so it is noticed in the heading: Encrypted genome in control of patient as a way foreword in the NGS era, for example.

Minor Essential Revisions

If the text is changed, much of the background and advantages could be put in tables for easier reading, as the text is so unbroken.

Accept after major and minor revisions.

An article containing a concept of importance

No statistical revisions needed

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
