Reviewer’s report

Title: Database Mining for Selection of SNP Markers Useful in Admixture Mapping

Version: 1 Date: 21 October 2008

Reviewer: Jason Moore

Reviewer’s report:

This is a well-written paper that addresses an important topic. The methods and results are clearly presented and the introduction and discussion are appropriate. The results are all publically available which is nice. Are the software you used to complete the analysis also freely available? This wasn’t clear. Freely distributing the algroithms used might help improve the impact of the paper.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
