Reviewer’s report

Title: Improvement in symptoms and signs in the forefoot of patients with rheumatoid arthritis treated with anti-TNF therapy

Version: 1 Date: 12 March 2010

Reviewer: Anita Williams

Reviewer’s report:

This is a well written paper in which the study is well justified, detailed and discussed.

Results in abstract too much detail - it is at the discretion of the authors whether to reduce this and provide a more concise account of the results

Brown, Conaghan et al [29] in the text change to Brown et al [29]

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
