Reviewer's report

**Title:** Clinical Features and Outcomes of Foot Keloids Treated Using Complete Surgical Excision and Full Thickness Skin Grafting Followed by Corticosteroid Injections Combined with Applications of Silicone Gel Sheeting

**Version:** 1 **Date:** 28 April 2013

**Reviewer:** sanghoon cha

**Reviewer's report:**

This paper investigates patient age, total size, gender, etiology, previous treatment history and modality, recurrence, and clinical photographs of the foot keloids. As the authors have highlighted, this paper maybe the first one to study foot keloids systemically. This is a very worthwhile paper in this regard, adds excellent data on this foot keloids, and this reviewer would love to see it published in JFAR.

However, there are some areas of the paper that need some revision before it is ready for publication. The main points that required correction are:

- I cannot find ‘Table 1 and 2’ within the manuscript.
- needs formatting changes to conform to this journal.

**Level of interest:** An article of outstanding merit and interest in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
