Reviewer's report

Title: Rotational strength, range of motion, and function in people with unaffected shoulders from various stages of life

Version: 1 Date: 6 January 2009

Reviewer number: 4

Reviewer's report:

The essential subject of the paper is a very interesting one. Authors succeeded to proof the relationship between impairments and function in persons without shoulder problems using two-hundred ninety-four subjects. The focus of this manuscript may well be worthy of publication.

My assessment of the article should be accept without revision, and an article of importance in its field. Quality of written English is also acceptable.
