Reviewer's report

Title: The Incidence of Total Hip Arthroplasty after Hip Arthroscopy in Osteoarthritic Patients

Version: 2 Date: 22 June 2010

Reviewer number: 2

Reviewer's report:

I find the manuscript of low interest, but it may be worth publishing. I think the results represent selection bias, and that it represents very limited new information. I am not confident that the statistics are correct and a statistician should be consulted before publication. Authors state that they have added a cox regression analysis calculating the survival probability. I believe that the analysis in the manuscript is based on a Kaplan-meyer analysis and I do not understand the p values after each survival probability. A review of statistics is therefore recommended.

Otherwise I find answers and corrections satisfactory.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
