Reviewer's report

Title: Grip strength measurements at two different wrist extension positions in chronic lateral epicondylitis- comparison of involved vs. uninvolved side in athletes and non-athletes: a case-control study

Version: 3 Date: 4 August 2010

Reviewer number: 2

Reviewer's report:

The revised manuscript is much better than the first draft. Although, all comments and questions are answered and considered in this manuscript but a minor revision need to be entered to this article;

Minor Essential Revisions:
- In result section of abstract; when you say statistical differences between data, it is necessary to use P value instead of M+/-SD. It is not completely clear that in which amount of P value you found these differences.
- In study design section, Please specify which university or institute approved the ethical issue of this study!
- All tables and graphs are not good enough for publication and needs more attention to correct them. They made me really confused!

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
