Reviewer's report

Title: A displaced stress fracture of the femoral neck in an adolescent female distance runner with female athlete triad: a case report

Version: 1 Date: 30 November 2009

Reviewer number: 1

Reviewer's report:

This is potentially an interesting case report that describes a case of displaced stress fracture of the femoral neck in adolescent female athlete. It is well written and the authors made a comprehensive discussion regarding the clinical, radiologic, and pathophysiologic characteristics of this disease. The reviewer has several comments.

If there are any similar case reports in the literature, those should be referred and also be discussed. If not, the authors should clearly mention that this is the first case report on this site.

Please make a discussion on the recommended treatments based upon the Gynecologic points.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
