Reviewer's report

Title: The kinematics of upper extremity reaching-a reliability study on people with and without shoulder impingement syndrome

Version: 1 Date: 15 December 2009

Reviewer number: 2

Reviewer's report:

Major compulsory Reviews;
I have had great problems envisaging the actual assessment process. I am unaware of the size of the target and the sensor, and feel I am unable to carry this assessment out due to the lack of information.
Photographs of the sensor and target would be a help, as would be the dimensions of them both.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
