Reviewer's report

Title: Effect of a 6-week dynamic neuromuscular training programme on ankle joint function: A Case report

Version: 2 Date: 8 February 2011

Reviewer number: 2

Reviewer's report:

The authors have revised the manuscript for clarity and have substantially improved the presentation of this case. There is only one editorial point to consider for revisions. Please see below:

1. Modified Standardized Mean Difference: In the equation within the Methods section, the authors refer to the difference in outcome between groups. Because this is only one subject, I would recommend revise to state differences between pre-and post- intervention.

Level of interest: An exceptional article

Quality of written English: Acceptable
