Title: Clinical examination of the knee: know your tools for diagnosis of knee injuries

Version: 1 Date: 18 April 2011

Reviewer number: 3

Reviewer’s report:

Comments and Questions to the author
This review paper focused on the commonly used manual tests and signs for knee examinations. The author describes the importance of performing these tests in the right way for the correct clinical diagnosis. In this point of view, I completely agree with the author. However, there is a serious problem. The author has just outlined the name and how to perform the several tests and examination. This kind of contents is more proper for text book than scientific journal. In my understanding, the SMART journal is basically scientific journal. Finally, I do not think that we can accept this paper for the publication.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
