Reviewer’s report

Title: Calcium phosphate-hybridized tendon graft to enhance tendon-bone healing two years after ACL reconstruction in goats

Version: 2 Date: 21 June 2011

Reviewer number: 1

Reviewer’s report:

The revisions are appropriate and address the reviewers comments.
The addition of the statistics is helpful.
The authors have appropriately removed some of the excessive speculations.
I still think the authors need to be careful making conclusions about knee stability and graft function, as these were not evaluated in this small number of animals.

1. Is the question posed by the authors new and well defined? YES
2. Are the methods appropriate and well described, and are sufficient details provided to replicate the work? YES
3. Are the data sound and well controlled? YES
4. Does the manuscript adhere to the relevant standards for reporting and data deposition? YES
5. Are the discussion and conclusions well balanced and adequately supported by the data? GENERALLY YES
6. Do the title and abstract accurately convey what has been found? YES
7. Is the writing acceptable? THERE ARE A FEW GRAMMATICAL ERRORS THAT COULD BE CORRECTED DURING EDITING.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
