Reviewer's report

Title: Calcium phosphate-hybridized tendon graft to enhance tendon-bone healing two years after ACL reconstruction in goats

Version: 2 Date: 22 June 2011

Reviewer number: 3

Reviewer's report:

Pg 12 line 7: What did you mean "gap area"? It is my understanding that "gap area" means a remaining area after cross-sectional area of the bone tunnel at aperture is subtracted by area occupied by graft tendon.

Pg 13 line 1: Concerning about comparison of bone tunnel enlargement and histologic analysis, non-parametric analysis would be appropriate than student's t-test because numbers of experimental goats were small.

Pg 13 line 11; Did you mean that bone tibial tunnel increased two times after surgery in untreated group? In clinical practice, 200% tunnel widening is extraordinary rare.

Pg 13 line 12: Did you mean that tibial tunnel decreased 13% after surgery in CaP group? Can it be possible in clinical practice?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
