Reviewer's report

**Title:** Functional assessments used by occupational therapists with older adults at risk of activity and participation limitations: A systematic review and evaluation of measurement properties

**Version:** 2  **Date:** 2 September 2012

**Reviewer:** Bianca Maria Buurman

**Reviewer's report:**

The authors have addressed all concerns properly. I think that by more specifically indicating phase 1 and phase 2, the manuscript and objectives are more clear.

Although I still think that starting with one research question focused on assessment instruments would be the best option, I understand the feasibility concern.

The authors asked me a question on inclusion criteria; I think the last option, by providing an example is most clear.

I wish the authors good luck in conducting their systematic review

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interest
