Reviewer’s report

**Title:** Primary Care-Based Educational Interventions to Decrease Risk Factors for Metabolic Syndrome for Adults with Serious Mental Illness: A Systematic Review

**Version:** 3  **Date:** 7 November 2013

**Reviewer:** Rohan Ganguli

**Reviewer’s report:**

The manuscript is improved and the authors have been responsive. However, a very influential recent paper by Daumit et al. NEJM 2013 needs to be added to their review and to Table 3. This study had almost 300 subjects, was a randomized controlled clinical trial, and had highly significant results with respect to weight loss associated with the intervention.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

No competing interests
